TURFING TO FRONTAGES

The surface shall be lightly and uniformly firmed by rolling or treading, and reduced to a fine finish up to 20mm in all directions, across greater than 30mm diameter, and shall be removed from the surface. Apply an even application of approved fertilizer at a rate of 30g/m² and allow to settle. No areas shall be left in unimproved, dry or frost weather or in other unsuitable weather conditions. The turves shall be laid in a stretcher bond pattern, closely butted and firmed into position to the correct levels. The turves should be laid off-plumb, weather over any previously laid. A covering of fine chert topsoil (conforming with BS 3882) should be applied to the laid turf and brushed well into the joints. Water the turves to prevent drying out before establishment.
