

Economic Update

UK. After only tepid annual **economic growth** of 1.4% in 2018, growth in quarter 1 was unexpectedly strong at 0.5%. However, this was boosted by stock building ahead of the original March Brexit deadline so quarter 2 was expected to be slightly negative and duly came in at -0.2% q/q, +1.3% y/y.

After the Monetary Policy Committee raised **Bank Rate** from 0.5% to 0.75% in August 2018, it is little surprise that they have abstained from any further increases since then. We are unlikely to see any further action from the MPC until the uncertainties over Brexit clear. If there were a no deal exit, it is likely that Bank Rate would be cut in order to support growth. Nevertheless, the MPC does have concerns over the trend in wage inflation which peaked at a new post financial crisis high of 3.9% in June before edging back to 3.8% in July, (excluding bonuses). Growth in employment fell to only 31,000 in the three months to July, well below the 2018 average, while the unemployment rate remained at 3.8 percent, its lowest rate since 1975.

As for **CPI inflation** itself, this fell to 1.7% in August and is likely to remain close to 2% over the next two years. If there was a no deal Brexit though, it could rise towards 4%, primarily as a result of imported inflation on the back of a weakening pound.

The rise in wage inflation and fall in CPI inflation is good news for **consumers** as their spending power is improving in this scenario as the difference between the two figures is now around 2.1%, i.e. a real terms increase. Given the UK economy is very much services sector driven, an increase in household spending power is likely to feed through into providing some support to the overall rate of economic growth in the coming months.

Brexit. The Conservative minority government is now led by a new Prime Minister in Boris Johnson, who has spoken strongly of being adamant that the UK will leave the EU on 31 October, even if there is no deal. However, his proroguing of Parliament was overturned by the Supreme Court and Parliament carried a bill to delay Brexit until 31 January 2020 if there is no deal by 31 October. MPs also voted down holding a general election before 31 October, though one is likely before the end of 2019; this could result in a potential loosening of monetary policy and therefore medium to longer dated gilt yields could rise on the expectation of a weak pound and concerns around inflation picking up. All eyes are now on whether a deal can be agreed by 31 October based on new proposals being put to the EU.

USA. President Trump's massive easing of fiscal policy in 2018 fuelled a (temporary) boost in consumption in 2018 which generated an upturn in the rate of growth to 2.9% for 2018, just below his target of 3%. Growth in quarter 1 of 2019 was a strong 3.1% but growth fell back to 2.0% in quarter 2. The strong growth in employment numbers during 2018 has reversed into a falling trend during 2019, indicating that the economy is cooling, while inflationary pressures are also weakening. After the Fed increased rates by 0.25% in December 2018 to between 2.25% and 2.50%, it has taken decisive action to reverse monetary policy by cutting rates by 0.25% in each of July and September in order to counter the downturn in the outlook for US and world growth. There are expectations that it could cut again in December.

EUROZONE. The annual rate of growth for 2018 was 1.8% but is expected to fall to possibly around half that rate in 2019. The European Central Bank (ECB) ended its programme of quantitative easing purchases of debt in December 2018, which meant that the central banks in the US, UK and EU had all ended the phase of post financial crisis expansion of liquidity supporting world financial markets by purchases of debt. However, the downturn in EZ growth in the second half of 2018 and into 2019, together with inflation falling well under the upper limit of its target range of 0 to 2%, (but it aims to keep it near to 2%), has prompted the ECB to take new measures to stimulate growth. At its March meeting it said that it expected to leave interest rates at their present levels “at least through the end of 2019”, but that was of little help to boosting growth in the near term. Consequently, it announced a third round of TLTROs; this provides banks with cheap borrowing every three months from September 2019 until March 2021 which means that, although they will have only a two-year maturity, the Bank is making funds available until 2023, two years later than under its previous policy. As with the last round, the new TLTROs will include an incentive to encourage bank lending, and they will be capped at 30% of a bank’s eligible loans. However, since then, the downturn in EZ and world growth has gathered momentum so at its meeting on 12 September, it cut its deposit rate further into negative territory, from -0.4% to -0.5% and announced a resumption of quantitative easing purchases of debt. It also increased the maturity of the third round of TLTROs from two to three years. However, it is doubtful whether this loosening of monetary policy will have much impact on growth and unsurprisingly, the ECB stated that governments will need to help stimulate growth by fiscal policy.

CHINA. Economic growth has been weakening over successive years, despite repeated rounds of central bank stimulus; medium term risks are increasing. The trade war with the US does not currently appear to be having a significant impact on growth. Major progress still needs to be made to eliminate excess industrial capacity and to switch investment from property construction and infrastructure to consumer goods production. It also needs to address the level of non-performing loans in the banking and credit systems.

JAPAN. has been struggling to stimulate consistent significant GDP growth and to get inflation up to its target of 2%, despite huge monetary and fiscal stimulus. It is also making little progress on fundamental reform of the economy.

WORLD GROWTH. The trade war between the US and China on tariffs is a major concern to financial markets and is depressing worldwide growth, as any downturn in China will spill over into impacting countries supplying raw materials to China. Concerns are focused on the synchronised general weakening of growth in the major economies of the world compounded by fears that there could even be a recession looming up in the US, though this is probably overblown. These concerns have resulted in government bond yields in the developed world falling significantly during 2019. If there were a major worldwide downturn in growth, central banks in most of the major economies will have limited ammunition available, in terms of monetary policy measures, when rates are already very low in most countries, (apart from the US), and there are concerns about how much distortion of financial markets has already

occurred with the current levels of quantitative easing purchases of debt by central banks. The latest PMI survey statistics of economic health for the US, UK, EU and China have all been sub 50 which gives a forward indication of a downturn in growth; this confirms investor sentiment that the outlook for growth during the rest of this financial year is weak.
