## 1.0 Introduction

- 1.1 We are instructed by DH Group, the Applicant, to submit an application for full planning permission to erect a newbuild unit on Plot 9 (formerly plots 9 and part plot 11) at Malton Enterprise Park.
- 1.2 The applicant has previously secured a consent for Plot 9 (Application No: 20/00350/MFUL) to build a purpose built production facility with purpose built offices, ancillary accommodation and associated car parking (B1, B2 & B8 uses). Unfortunately this tenant withdrew their interest and the applicant is therefore now seeking consent for an alternative, albeit similar, design.
- 1.3 There remains extant a consent for the wider site development of which this application forms a part together with the previously consented and developed plots including plots 1, 5a, 6, 7, 8, 10 & 12.
- 1.4 The detailed layout and appearance of the proposed buildings is illustrated on the supporting drawings.
- 1.5 Other consultants supporting the application include, Structural Engineers, Highways Consultants & Flood Risk/Drainage Assessors who have all provided co-ordinated design, reports and information.
- 1.6 The purpose of this statement is to support the full planning application.

## 2.0 Location and Description

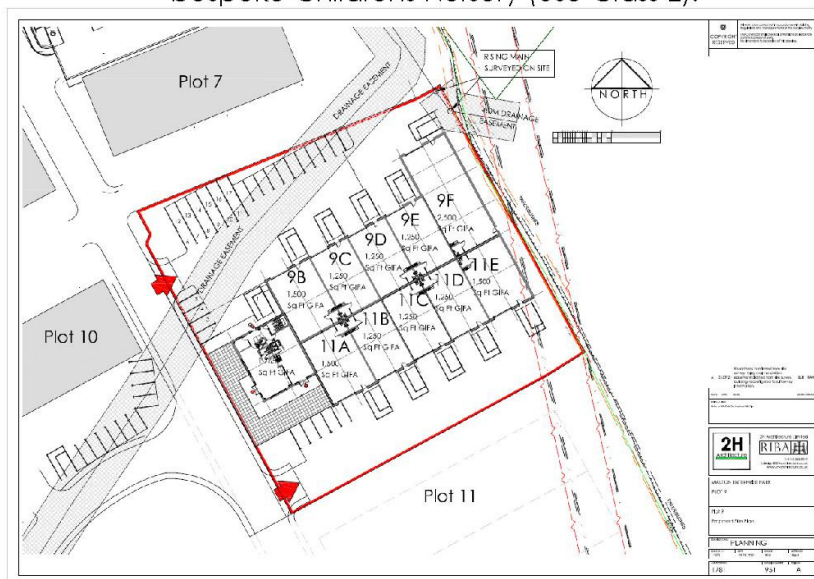

- 2.1 The site is located off the B1248 York Road and nearby A64 in Malton, a Market Town North East of York within the Ryedale District Council area.
- 2.2 Public transport bus services and the nearby rail network link the site to Malton, Scarborough and York.
- 2.3 The transport links and accessibility to the road network make the site an excellent location for business development as recognised with the established consent to develop the wider site.

- 2.4 The previous outline consent prior to use class re-classification on 01 September 2020 established the principle of B1, B2 and B8 uses on the site.
- 2.5 The masterplan for the wider site has been established with the estate road and services in place.
- 2.6 The application site for Plot 9 sits to the East of the estate road South of Plot 7 and East of Plots 10 and 12 which are currently under construction.
- 2.7 The site has a drainage easement across the parking areas related to a rising main and the proposal will create two new highway access points to serve both sides of the building separately.
- 2.8 The site area is 4551 sq m (1.12 Acres).

### 3.0 Use

- 3.1 The existing site is cleared for development.
- 3.2 The proposed use will be speculative units for E, B2 and B8 uses with the frontage unit (Unit 9A) dedicated to a bespoke Childrens Nursery (Use Class E).

**Fig 2: Proposed Site Plan (Dwg 1781.951A)**

- 3.3 Under the proposed new use the site will be maintained and sustained as business premises complementing and in context with the wider site and surroundings.
- 3.4 The site operates a sustainable urban drainage design to discharge excess surface water run off through a site wide masterplan. All surface water drainage run off will discharge into a holding pond which will then be discharged at a controlled rate into a watercourse. The drainage philosophy has been designed as part of the masterplanning of the whole project.

#### **4.0 Amount**

- 4.1 The proposed development will sit within the wider site context providing 'back to back' accommodation for local businesses comprising small units ranging between 1250 sq ft and 2500 sq ft footprints to facilitate a range of differing small businesses.
- 4.2 The philosophy of the development remains within the original framework of the wider site whilst addressing the demands of the market for a variety of unit sizes making efficient and sustainable use of the available site.
- 4.3 The design recognises the requirement for a mix and balance of unit types.

#### **5.0 Layout**

- 5.1 The proposals seek to reflect the setting out of the established site with dual access enabling each unit a dedicated access and servicing.
- 5.2 The pre-school nursery unit has dedicated parking access and secure boundaries whilst 'fronting' the development along the estate road access.
- 5.3 The layout has been designed to maximise the use of the proposed buildings as efficiently as possible whilst respecting the drainage easement and providing sufficient serviced external space to all units in line with

design@2Harchitecture.co.uk  
**www.2Harchitecture.co.uk**  
2H Architecture Limited

the principles established on previously constructed phases of the development.

## **6.0 Scale**

- 6.1 The scale of the development is in keeping with the established strategy for the whole site.
- 6.2 The proposal addresses the road with the two storey Nursery unit centred on the end elevation reducing the scale with the wider 'back to back' units to the rear of the site behind.

## **7.0 Appearance**

- 7.1 The external spaces and hardscape around the buildings are designed to meet planning policy and highways constraints whilst taking account of the business units practical uses and separating the nursery units external space requirements.
- 7.2 The contemporary aesthetic has been derived from the established previously constructed units on site and building features and materials are used to punctuate the elevations with common features and themes.
- 7.3 Metal cladding, brick and feature timber and architectural masonry sections have been used to bring commonality to the wider development whilst differentiating between the business uses and the scale of the frontage nursery unit. Windows to the nursery unit in matching PPC metal frames have low level cills to enable visibility for the children and this also helps bring the scale of the frontage unit into context.

## **8.0 Access**

- 8.1 The site is accessed via the estate road which is off the B1248 York Road which links Malton with the nearby A64 trunk road.
- 8.2 The site is easily accessed by local bus routes which also link to the rail network via Malton.

- 8.3 The site has excellent local highway links and so is easily accessed by car.
- 8.4 The intention is to provide car parking in line with Ryedale Council policy for B2 Units for both servicing and parking in ratio to gross floor space.
- 8.5 The site will be equally accessible to cyclists and this will be encouraged by the provision of a secure cycle stand per each unit securely located internally.
- 8.6 The development seeks to encourage a sustainable development and transportation /access philosophy.
- 8.7 Level Access will be provided to the principle entrance of each unit and all internal layouts will be compliant with Part M of the building regulations.
- 8.8 The nursery use will have dedicated parking suited to the use and capacity of the business.

## **9.0 Policy**

- 9.1 In accordance with the NPPF (National Planning Policy Framework) the proposed design will improve the quality and character of the site and maintain its functionality sustainably for it's whole lifetime.
- 9.2 The context and appropriate design and landscaping will complement the surroundings and add to the distinctive local achitecture in form and function.
- 9.3 The Commission for Architecture and the Built Environment (CABE) set out objectives for urban design and public space in England. These principles have been adhered to in the planning and masterplanning of the site to ensure the character and identity of the site is maintained through a cohesive design approach and philosophy.

## 10.0 Summary

- 10.1 Approval is sought to develop the site in accordance with the established business use in the Ryedale District Council Development Plan (site 21) with a variety of sizes of business starter units.
- 10.2 The intent of the proposal is to provide accommodation for businesses both within the local area and to attract new commerce to the region.
- 10.3 The bus, road and rail network links provide accessibility both locally, regionally and nationally.
- 10.4 The design of the proposed units will sit in context with the wider site development and blend with the established previously constructed plots providing an appropriate buffer between the approach from the A64 and the larger industrial units beyond to the North East of the site.
- 10.5 The access and site highways are designed to provide a proposed adoptable standard access and site servicing in accordance with council Policy.
- 10.6 The proposed scale, massing and materials align with the previously approved plots and will continue the development of a coherent site and identifiable business unit aesthetic.
- 10.7 The proposals integrate all of the above advice and design to allow the site to be maintained to the highest standard and quality into the future as a viable sustainable development contributing to the local economy, community and to the social and economic prosperity of the area.
