

Key

- - - planning application boundary
- - - house boundary
- root protection area (RPA) trees
- existing tree

The RPA is the area around a tree trunk that is essential for its health and stability. It is defined by the tree's canopy spread and its root system. The RPA is the area that must be protected during any construction work that may affect the tree.

Do not scale from this drawing.
 Note: All dimensions are in millimetres unless otherwise stated. All dimensions should be reported above drawing to 3 decimal places.

BECKSIDE TREE SURVEY

TREE NO.	SPECIES	Stem dia. (cm)	Height (m)	Condition	Observations	Category
1	Alder	0.65	16	Good	4 stems	A
2	Alder	0.51	9	Good	On bank of beck	A
3	Alder	0.85	13	Poor	On bank of beck	C
4	Yew	0.31	6	Good		A
5	Cherry	0.88	12	Good		A
6	Maple	0.23	6	Good	Below power lines	A
7	Birch	0.52	12	Good		A
8	Birch	0.24	12	Good		A
9	Walnut	0.57	9	Good	Leaning	A
10	Birch	0.20	10	Good	On steep bank above beck	A
11	Birch	0.55	8	Good	Double stemmed	A
12	Birch	0.26	8	Good	On steep bank above beck	A
13	Birch	0.20	8	Good	On steep bank above beck	A
14	Birch	0.23	12	Good	On steep bank above beck	A
15	Walnut	0.43	11	Good	On steep bank above beck	A
16	Alder	0.45	11	Poor	On steep bank above beck	C
17	Alder	0.30	11	Good	Multi stemmed on steep bank above beck	A
18	Alder	0.20	11	Good	Multi stemmed on steep bank above beck	A

Tree protection measures: 2.0m high 1.8m x 1.8m timber posts with tamper proof connectors and stabilizing stays. Fencing should remain for the duration of the construction period and be inspected regularly.
