

Hedge Planting

- All gaps in the existing hedgerow to be planted with new, semi-mature plants.
- New boundary hedge to be planted using 100/120mm tall, well-developed stock in hedgerow 300mm apart.
- Plans are to be staggered out at a spacing of 225mm in each row. Rowspan 25%, Buckram 25%, Buckram 50%.
- Other species to be considered to enhance botanical variety, to be planted at 1m x 3m spacing in hedge line. Holly, Hazel and Wild Privet as single specimens. Rabbit protection to be provided by other plant guards with conical, leading tubes with conical support or hedging tube, at least 800mm tall. For further rabbit protection, rabbit fencing may be required. It should be set to 150mm below ground level. Rowspan hedges to be allowed to grow and be maintained at a height of 3m and 1-1.5 width. Hedge to be trimmed at regular intervals every 2-3 years.

Tree Planting / Planting Bed

- Beds and pits are to be planted between November and March, but not when the soil is waterlogged or frozen.
- Holes are to be large enough to accommodate the roots, the bottom of the hole to be filled over and the tree to be positioned on a mound of compost and topsoil before placed in the hole. The hole is to be backfilled with top soil, spread layer by layer and the ground level set with a 100mm layer of mulch.
- Trees to be protected with conical guards or tubes.
- The proposed planting bed will provide a road screen as well as security.
- These species will include:
Field Maple, Beech, Wild Cherry, Maritime Pine, Scots Pine, Hornbeam and English Oak.
But one species to be dominant.
- Where possible, semi-mature trees are to be planted in staggered rows to prevent direct views.
- Under planting to be implemented along the Eastern, Western and Southern boundaries.
- Species to consist of Holly, Yew, Buckham, Hawthorn, Elderberry and Rose Rugosa.
- All beds have to be replaced the following planting season.
- Guards and rabbit fencing to be removed when no longer required.
